

TMKD PRESET - pAraNoiD kit - **METAL**

Here you can get a free chain of VST plugins and presets as quick go-to settings or starting point for your mix (using just freeware) to make the Paranoid Kit sound bigger and more powerful with very few personal tweaks.

Some considerations before you get started...

- I have used for these presets the Paranoid-X version.
- You would only need these freeware plugins:

Parametric and Graphic EQ

SonEQ by Sonimus (*Mac, Windows*)

Marvel GEQ by Voxengo (*Mac, Windows*)

Compressor

ReaXcomp by Cockos (*Windows*)

Rough Rider by Audio Damage (*Windows*)

Blockfish by DigitalFishPhones 'Fish Fillet' (*Mac, Windows*)

Stereo Expander

RescueMK2 by Variety Of Sound (*Windows*)

Reverb - Impulse Response

SIR1 by SIR Audio Tools (*Windows*)

Bricasti M7 Impulse Response Library v1.1 by Smplicity

These freeware VST plugins work pretty well for me but obviously you can use the ones that works better for you to get the sound you are looking for.

- I leave for you these chains of plugins loaded in Cubase as an example and the screen captures of all presets to be used in any other DAW.

- You will have to adjust the track levels to sit in your mix.
- It does not try to be all things to all people but my own perspective of a powerful drum sound for metal mixes using this awesome kit.

Make the best of it!!!
